MCC

Mobile Country Code

GSM networks are identified internationally using an unique 5- to 6-digit code. The assignment of clear text provider names is stored in the GSM devices. This mobile network code is used for preferred or exclusive network selection. It is built up from the 3 digit mobile country code (MCC) and a 2-3 digit provider code (cellular network in a country).

The first digit of the MCC gives a rough geographical correlation:

- 2 Europe
- 3 North America and the Caribbean
- 4 Asia, India, Middle East
- 5 Australia and Oceania
- 6 Africa
- 7 South America
- 9 World

The MCC 901 does not identify a country, but stands for services, which can be received or used world-wide.

A brief summary

- MCC is an international identification of the GSM networks
- Defined by ITU-T as standard E.212
- First digit gives a rough geographical correlation
- First 3 digits identify a country
- MCC plus 2-3 digits identify a concrete network in a country
- 901 xx identifies services that can be received or used world-wide
